```python
deposit = float(input('Enter Deposit amount: '))

if deposit > 10000:
  ir = 3.5
elif deposit > 1000:
  ir = 3.25
else:
  ir = 3.0

total = (1 + ir/100) *deposit
print (f'deposit at the end of the year: {round (total, 2)}'
```
